

Cover Page

This section describes the cover page of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the cover page of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the cover page of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the cover page of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the cover page of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the cover page of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the cover page of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the cover page of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access.

Introduction

This section describes the introduction of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the introduction of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the introduction of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the introduction of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the introduction of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the introduction of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the introduction of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the introduction of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the introduction of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access.

Objectives & Scope

This section describes the objectives & scope of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the objectives & scope of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the objectives & scope of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the objectives & scope of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the objectives & scope of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the objectives & scope of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the objectives & scope of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the objectives & scope of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the objectives & scope of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access.

System Analysis

This section describes the system analysis of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the system analysis of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the system analysis of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the system analysis of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the system analysis of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the system analysis of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the system analysis of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the system analysis of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the system analysis of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access.

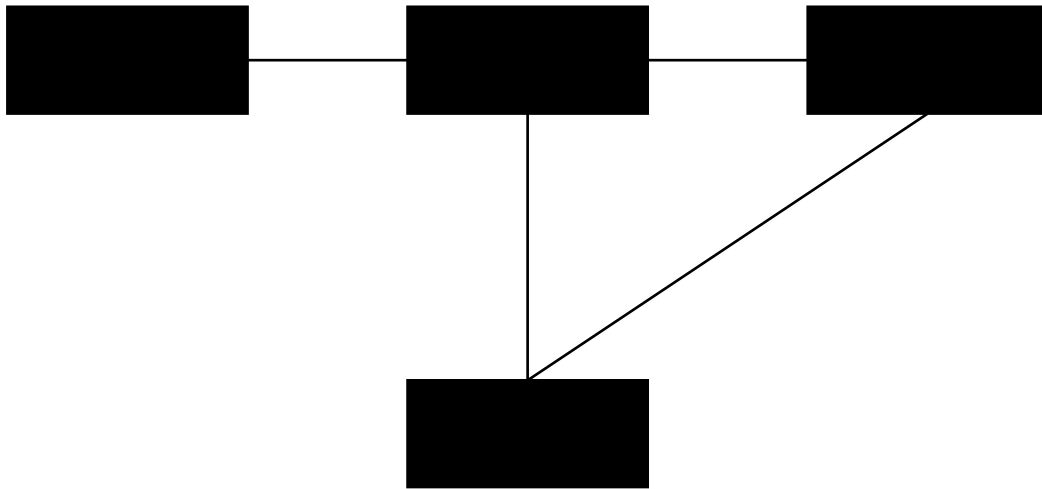

Modules

This section describes the modules of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the modules of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the modules of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the modules of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the modules of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the modules of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the modules of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the modules of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the modules of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access.

Database Design

Table	Key Fields
User	user_id, username,password,role
Property	property_id,address,rent,status
Tenant	tenant_id,name,phone,property_id
Payment	payment_id,tenant_id,amount,date,status

ER Diagram

Relationships: User manages Property; Property is assigned to Tenant; Tenant makes Payment.

Testing

This section describes the testing of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the testing of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the testing of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the testing of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the testing of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the testing of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the testing of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the testing of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the testing of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access.

Future Enhancements

This section describes the future enhancements of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the future enhancements of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the future enhancements of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the future enhancements of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the future enhancements of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the future enhancements of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the future enhancements of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the future enhancements of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access.

Conclusion

This section describes the conclusion of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the conclusion of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the conclusion of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the conclusion of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the conclusion of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the conclusion of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the conclusion of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the conclusion of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access. This section describes the conclusion of the House Rent Management System. The application allows administrators to manage properties, tenants, rent payments, and reports using a centralized database. It improves efficiency, reduces paperwork, and provides secure access.
